Anggar Pujianto

Software developer · Jakarta

I build web apps end to end: React on the front, Java Spring Boot on the back. Since 2023 I've worked on Avantrade, a wealth management platform at Indivara Group, where I shipped eKYC onboarding and a payment module for digital wallets. Before that I spent a few years building frontends for banks, fintechs and a food manufacturer, and two years as a QA tester.

EXPERIENCE

Product Specialist, Indivara Group

Jul 2024 – now

Avantrade, a wealth management system used by financial institutions for investment and asset management.

- Shipped eKYC (electronic Know Your Customer) so new users verify themselves online, which sped up onboarding and reduced manual verification by the ops team.
- Built the payment module with digital wallet integration. Each wallet provider sits behind a shared interface, so adding a new one means writing an adapter rather than touching the core flow.
- Wrote and maintained Spring Boot services and REST APIs used by several internal systems.
- Built React screens for the client-facing app.
- Set up release pipelines in Jenkins and GitLab CI, and wrote scripts to automate data and system migrations.
- Wrote technical specification documents and worked with business, ops and engineering to scope features.

Spring Boot · React · Oracle DB · Jenkins · GitLab CI

Frontend Developer, Indivara Group

Apr 2023 – Jan 2024

Avantrade, same product as above.

- Started the Avantrade frontend from an empty repo with React, Redux Toolkit and Tailwind CSS.
- Worked with business analysts to define application flows before they went to development.
- Reviewed code, integrated APIs with the backend team, and wrote onboarding docs for new developers.
- Helped the backend team build APIs in Spring Boot.

React · TypeScript · Redux Toolkit · Tailwind CSS

Frontend Developer (part-time), Sagara Technology

Oct 2020 – Aug 2023

Contract work for several clients, mostly in finance.

Bahana Sekuritas · internal investment tool

Dec 2022 – Aug 2023

Built the frontend from scratch for a tool that tracks investments and projects profit and loss. React, Redux Toolkit, Ant Design.

Agrinesia Raya · online cake shop

Feb 2022 – Aug 2022

A store that finds the nearest cake shop and hands the order to a delivery service. Built reusable Next.js components and used server-side rendering and static generation for speed and SEO.

RUMA (Mapan) · PPOB webview

Sep 2021 – Jan 2022

Built two apps from scratch: the customer webview for bill payments and top-ups, and the admin dashboard for managing products and content. Handled Android permissions for the native app wrapper and integrated AppsFlyer.

Bank Rakyat Indonesia · PasarID

Oct 2020 – May 2021

Built a site where people order from traditional markets and get it delivered by courier, with Google Maps for market locations and delivery tracking. Later revamped the UI and added features.

QA Tester, Enigma Cipta Humanika

Feb 2021 – Feb 2023

Placed at Mekar Investama Sampoerna.

- Wrote test plans covering scope, schedule and estimates, then the test cases and scripts to go with them.
- Logged and tracked bugs through to fix with the development team.

SKILLS

Frontend	React, Next.js, TypeScript, Redux Toolkit, Tailwind CSS, Ant Design
Backend	Java Spring Boot, REST APIs, Go, Oracle DB
Delivery	Docker, Jenkins, GitLab CI, server deploys and log checks
Testing	Test plans, test cases, bug tracking

EDUCATION

B.S. Information Systems, Universitas AMIKOM Yogyakarta

2015 – 2019

GPA 3.49 / 4.00. Thesis: *Perahu Naga*, an offline Android game made in Unity.

Full Stack Programming, Enigmacamp (2020)

Cloud Computing, Digital Talent Scholarship by Kominfo (2020)
